

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-9157
Project Name	Cricket Player Performance Tracking Application (CRICKSTATS)
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Salesforce Lightning Experience / Lightning App	Provides the user interface, navigation and home-page experience for CRICKSTATS within Salesforce.

2	Backend / Server-Side	Salesforce Platform + Salesforce Flow	Handles application logic and guided processes without a separate server. Screen Flow and Home Page Flow provide interactive automation.
3	Database / Data Storage	Salesforce Objects (Player & Match Performance)	Stores structured cricket player and match-performance data using custom objects, fields and relationships.
4	Cloud / Hosting / Deployment	Salesforce Cloud Platform	Hosts the application and its data in the Salesforce cloud, without separate hosting infrastructure.
5	Version Control & CI/CD	Salesforce deployment tools / metadata	Supports organized deployment of Salesforce configuration and components such as objects, fields, tabs, flows and app configuration.

6	Third-Party APIs / Other Tools	Salesforce Lightning components and Flow	Provides the interface and automation features needed for CRICKSTATS. No external third-party API is required for the core project.
