

Scalability & Future Plan

Date 30 September 2026
Team ID SWTID-2026-9157
Project Name Cricket Player Performance Tracking Application (CRICKSTATS)
Maximum Marks 1 Mark

Scalability & Future Plan:

This document explains how CRICKSTATS can be expanded in the future to manage more cricket players, match performance records, statistics, and users. The plan also describes possible enhancements to the Salesforce application while keeping the current Player Object, Match Performance Object, custom fields, relationships, Roll-up Summary, Lightning App, and Flows as the foundation of the system.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	The current application is designed mainly around the Player and Match Performance objects.	Additional cricket-related data may require more objects and relationships as the project grows.	Medium
2	The current Flow and Home Page provide the required user interaction but may need more automation for a larger system.	More records and users could require additional automation and optimized processes.	Medium
3	Performance tracking is currently focused on the main player statistics maintained in CRICKSTATS.	Advanced analytics and detailed historical comparisons may require additional reporting and dashboard features.	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	The Lightning App and Flows provide access to the current project users.	Support more users through suitable Salesforce access settings, organized navigation, and optimized Flows.
2	Data Storage	Player and Match Performance objects store player and match-level information.	Extend the data model with additional objects when required and maintain well-structured relationships and fields.
3	Performance	Roll-up Summary and Salesforce reports help summarize player performance.	Optimize automation, reports, dashboards, and Flow processes as the number of records increases.
4	Security	The application uses Salesforce access and object-based data management.	Apply appropriate profiles, permission sets, field-level access, and sharing controls as users and data increase.

Scalability & Future Plan

Project Name Cricket Player Performance Tracking Application (CRICKSTATS)

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve the existing Player and Match Performance data structure, fields, validation, and user experience.	Short Term	Cleaner data entry and easier management of player performance.
Phase 2	Enhance Salesforce Flows and Home Page interaction for smoother player and match-performance entry.	Medium Term	More interactive and user-friendly application workflow.
Phase 3	Add richer reports, dashboards, and performance comparisons for player statistics such as runs, wickets, averages, fours, and sixes.	Medium Term	Better visibility of player performance and trends.
Phase 4	Expand the application with additional cricket data, advanced automation, and improved access/security controls.	Long Term	Support a larger dataset, more users, and broader cricket performance tracking needs.

Future Direction of CRICKSTATS:

The future direction of CRICKSTATS is to gradually expand the Salesforce application from a basic player performance tracker into a more complete cricket performance management system. The existing Player and Match Performance objects can remain the core of the application while additional automation, dashboards, reporting, data management, and user-access features are introduced according to future requirements.

The planned improvements will help CRICKSTATS handle a larger number of players and match records while keeping the application organized, accessible, and easier to maintain.
